

Zamson Lim Zhen Pin

SOC Engineering · Detection · Purple Team

Kuala Lumpur, Malaysia +60 18-260 5389 zamsonlim@gmail.com zamsonl.github.io/portfolio-website
github.com/zamsonl linkedin.com/in/zamson-lim-b16617374

Final-year BSc (Hons) Cybersecurity student at Asia Pacific University. After a ransomware incident left my employer with no way to reconstruct what had happened, I proposed a Security Operations Centre, got approval, and **built and ran it as the only person on security** — architecture, detection engineering, incident response and reporting, all self-owned.

EXPERIENCE

Network & Security Administrator (Intern) Aug 2025 – Aug 2026
Palmgold Management Sdn Bhd · Kuala Lumpur · sole owner of security operations

- Proposed and built the company's **Security Operations Centre** after an August 2025 ransomware incident, growing it from a proof of concept to the production stack now running its monitoring.
- Deployed a **Wazuh SIEM with co-located OpenSearch** on a Proxmox host I set up myself, integrating firewall, switching, wireless, Windows endpoint, Active Directory and Zeek telemetry.
- Rolled out monitoring agents to **80+ Windows machines** via Active Directory Group Policy, using an idempotent installer safe to re-run.
- Built the network sensor — switch port mirroring into a multi-node Zeek cluster — and wrote custom decoders and correlation rules matched to the hardware actually in use.
- Ran **authorized purple-team exercises**, attacking from Kali Purple then detecting from the SIEM, turning each into detection content; surfaced an unmonitored network segment no rule could cover.
- Ran an **authorized internal vulnerability assessment** and delivered three audience-tailored reports.
- Recovered a full ingestion outage that had silently flipped every index read-only, and added retention policies so it could not recur.

OPEN-SOURCE TOOLING

Three single-file SOC consoles, de-identified and published 2026
zamsonl.github.io/portfolio-website · live demos and source

- SOC Traffic Map** — D3 world map over a firewall-fed alert index, with a threat-posture score that decays over time rather than accumulating.
- SOC Alert Console** — incremental polling and severity bucketing over a Wazuh index, every filter routed through one dispatcher so the counters and the feed cannot disagree.
- Packet Highway** — Three.js visualizer rendering firewall traffic as vehicles on a highway, using instanced meshes to hold frame rate on a live feed.
- Each is one HTML file with no build step and zero external requests, fully de-identified before publication.

SKILLS

SIEM	Wazuh (deployment, agents, custom decoders and correlation rules), OpenSearch query DSL, ingest pipeline design, file integrity monitoring, alert triage and incident response
NETWORK	Zeek network security monitoring, FortiGate policy and syslog, Aruba switching and wireless, traffic mirroring and decapsulation, Wireshark
SYSTEMS	Proxmox, Ubuntu / Rocky Linux, systemd tuning, Nginx reverse proxy and TLS, Windows Server, Active Directory and Group Policy at fleet scale
SECURITY	Purple-team exercise design, authorized vulnerability assessment (OpenVAS, Nmap, Nikto), malicious code analysis in isolated labs, Autopsy forensics, Kali Linux
CODE	Python, JavaScript (D3.js, Three.js), Bash, Java, C++, C#, Rust

EDUCATION & COMPETITIONS

BSc (Hons) Cybersecurity — final year Asia Pacific University, Kuala Lumpur · 2024–2027.	Capture The Flag SekaiCTF, CYNX, BeSec, picoCTF. Reverse engineering, web exploitation, forensics and OSINT.	Languages English, Mandarin, Malay, Cantonese.
